EuroStar Evaluation Explanation Page

Important: The Pedigree Information printed in this catalogue is as supplied by or on behalf of the breeder. The responsibility for the accuracy of the information therefore rests solely with the breeder and not Sheep Ireland.

Evaluations should **never be the only tool** you use when selecting animals for breeding. Animals must also be examined to ensure the animal is also physically correct; an animal that is not physically correct (ie. mouth, feet, etc.) cannot compensate for this fault regardless of its evaluation and should be avoided for breeding purposes.
See below how to interpret the EuroStar catalogue.

★★★★★ EuroStars – How to interpret them

- Each star represents where the animal ranks on each index in 20% bounds
- **One star** represents the **bottom 20%** of the breed for that trait
- **Five star** represents the **top 20%** of the breed for that trait
- The higher the stars, the higher the predicted profitability of that animal

Animals that only have the outline of a star represent animals that have within flock evaluations, this means the star rating of these animals cannot be compared to any other animals from a different flock.

Rank

- This figure indicates more precisely where the animals rank within the breed. eg. Top 16% (see example below)
- This is displayed with a shaded line, the further to the right these are on the scale, the better its position within the breed.

OviFlock

Hill Sheep Flockbooks

OviFlock is an EIP (European Innovation Partnership) project funded by the Department of Agriculture, Food and the Marine (DAFM) and aims to establish hill sheep flockbooks in Ireland. This project will support hill sheep breeders by providing funding and utilizing digital tools for evidence-based decision-making. The project will focus on genotyping female sheep to record ancestry, which is crucial for avoiding inbreeding, maintaining unique populations, and enabling genetic improvement.

EIP and Funding:

The OviFlock project is part of the European Innovation Partnership initiative, co-funded by the European Commission and the Irish Government. A total of €650,000 has been awarded to the project, which will be used for its implementation.

Hill Sheep Flockbooks:

The project aims to create flockbooks for Irish hill sheep breeds, which is currently lacking. This involves genotyping selected female sheep to establish ancestry records.

Digital Tools and Technologies:

A key aspect of OviFlock is the integration of digital tools and technologies to support decision-making on farms. This includes using DNA data to track ancestry and manage inbreeding.

Benefits of the Project:

The project will help hill sheep breeders in several ways, including:

- o Avoiding inbreeding by identifying related animals.
- o Maintaining unique breed populations.
- o Enabling genetic improvement programs.
- o Providing a foundation for future breeding decisions.

Eligibility:

Participation in the project is open to breeders who are members of recognized hill ram breeding groups so contact us in Sheep Ireland today!

Project Timeline:

The project is expected to run for five years.

Collaboration:

The project involves a collaboration of various industry stakeholders, including Sheep Ireland, Teagasc, Irish farmer representative bodies, meat processors, hill ram breeders and commercial hill sheep farmers.
